

Q1. Design a website for your portfolio (personal website). The pages of the website are described below. The folder structure should be

- personal-website (folder)
 - index.html
 - resume.html
 - projects.html
 - blog.html
 - subscribe.html
 - css (folder)
 - main.css
 - resume.css
 - projects.css
 - blog.css
 - subscribe.css
 - html (folder)
 - blog (folder)
 - my-first-site.html

A. Home page (index.html): The home page should have your name, image and brief “about me” information. It should also include the links to the other three pages. Your title should also have an image.

B. Resume (resume.html): Create a one-page (A4) resume.

C. Projects (projects.html): This should list all your projects. You may include the project name, description, images, links, etc.

D. Blog (blog.html): This should list all your blogs, with the most recent one on top.

E. Subscribe to blogs (subscribe.html): Create a form where visitors can enter their name, email id, and other information (include other options creatively) to subscribe to your blogs.

F. First blog (my-first-site.html): Write the first blog about your experience creating your personal website.

Please note

- The looks of each page should be similar. It ensures a coherent design across the website.
- main.css contains the overall design elements to ensure that the pages are coherent. And other css pages style the respective pages.
